

Table of contents

Graphical illustration of components	<i>vii</i>
Nomenclature	<i>ix</i>

Part I. Script

Chapter 1	What is Refrigeration? Basic concepts and definitions	1.1
1.1	Brief overview of the “Refrigeration practice”	1.1
1.2	The main data in the history of Refrigeration	1.2
1.3	Refrigeration sector in the energy balance of the World	1.4
1.4	Temperature scale: Refrigeration, Cryogenics, Cryophysics	1.5
1.5	Basic concepts and definitions	1.6
	1.5.1 Basic definitions of the block “energy”	1.7
	1.5.2 Basic definitions of the block “working fluid”	1.11
	1.5.3 Processes in the refrigeration machine	1.13
	1.5.4 Exergoeconomics	1.14
1.6	Bibliography	1.18
Chapter 2	Analysis of machines working on inverse thermodynamic cycles	2.1
2.1	Classification, basic equations	2.2
	2.1.1 The refrigeration machine	2.2
	2.1.2 The heat pump	2.5
	2.1.3 The co-generation machine	2.6
2.2	Classification of the machines working on inverse thermodynamic cycles	2.7
2.3	Bibliography	2.7
Chapter 3	Methods to produce “cold” and to achieve low temperatures	3.1
3.1	Methods to produce “cold”	3.1
	3.1.1 Without change of phase	3.1
	3.1.2 With change of phase	3.2
3.2	Methods to achieve low temperatures	3.4
	3.2.1 Expansion with work production	3.4
	3.2.2 Expansion without work production	3.5
	3.2.3 Chemical reactions and cooling mixtures	3.6
	3.2.4 Vortex effect	3.7
	3.2.5 Thermoelectrical process	3.7
	3.2.6 Magnetic process	3.8
3.3	Bibliography	3.8
Chapter 4	Thermodynamic and exergoeconomic analyses of the simple vapor-compression refrigeration machine	4.1
4.1	“Cycle Method” for the thermodynamic analysis	4.1
4.2	Entropy method for the thermodynamic analysis	4.8
4.3	Exergy analysis	4.9
4.4	Bibliography	4.10

Chapter 5	Working fluids	5.1
5.1	Systematization	5.1
5.2	One-component working fluids	5.3
	5.2.1 Properties	5.3
	5.2.2 Classification	5.6
	5.2.3 How to choose a working fluid	5.6
5.3	Mixtures as working fluids	5.10
	5.3.1 Concentration of a mixture	5.10
	5.3.2 Solubility	5.11
	5.3.3 Mixtures without azeotropic point	5.12
	5.3.4 Mixtures with azeotropic point	5.15
5.4	Mixtures “agent-sorbent”	5.15
5.5	Secondary working fluids	5.18
5.6	Bibliography	5.20
Chapter 6	Additional components of vapor-compression refrigeration machines	6.1
6.1	Additional components that do not affect the thermodynamic cycle	6.1
	6.1.1 Valves	6.1
	6.1.2 Reservoir	6.2
	6.1.3 Filter	6.2
	6.1.3 Dehydrator	6.2
	6.1.4 Lubricant separator	6.3
6.2	Additional components and processes that affect the thermodynamic cycle	6.3
	6.2.1 Superheating process	6.3
	6.2.2 Subcooler	6.4
	6.2.3 Liquid separator	6.6
	6.2.4 Regeneration heat exchanger	6.6
	6.2.5 Economizer	6.8
6.3	Bibliography	6.9
Chapter 7	Components of compression refrigeration machines	7.1
7.1	Theory of a compressor	7.1
	7.1.1 Theoretical compressor	7.1
	7.1.2 Clearance volume of the compressor	7.5
	7.1.3 Real indicator diagram	7.6
	7.1.4 Volumetric efficiency of the compressor	7.8
	7.1.5 Energetic coefficients of the compressor	7.10
	7.1.6 Classification of refrigeration compressors	7.11
7.2	Design of compressors	7.12
	7.2.1 Piston (reciprocating) compressors	7.12
	7.2.2 Rotary compressors	7.15
	7.2.3 Screw compressors	7.18
	7.2.4 Scroll compressors	7.22
	7.2.5 Turbo compressors	7.23
7.3	Heat exchangers	7.24
	7.3.1 Classification	7.24
	7.3.2 Design	7.26
	7.3.3 Exergy analysis	7.29
	7.3.4 Fouling in heat exchangers	7.29
7.4	Bibliography	7.30

Chapter 8	Two-stage refrigeration machines	8.1
8.1	Two-stage compression process	8.1
8.1.1	Why two-stage compression should be used	8.2
8.1.2	How to create schematics of two-stage refrigeration machines	8.3
8.1.3	Principles of optimization of two-stage refrigeration machines	8.5
8.2	Schematics of two-stage refrigeration machines	8.6
8.2.1	Two-stage refrigeration machine without interstage cooling and with one throttling valve	8.6
8.2.2	Two-stage refrigeration machine with incomplete interstage cooling and with one throttling valve	8.7
8.2.3	Two-stage refrigeration machine with incomplete interstage cooling and throttling valves in parallel	8.8
8.2.4	Two-stage refrigeration machine with complete interstage cooling and throttling valves in parallel	8.11
8.2.5	Two-stage refrigeration machine with incomplete interstage cooling, throttling valves in parallel, and subcooling process	8.12
8.2.6	Two-stage refrigeration machine with complete interstage cooling, throttling valves in parallel, and subcooling process	8.15
8.2.7	Two-stage refrigeration machine with incomplete interstage cooling and throttling valves in series	8.16
8.2.8	Two-stage refrigeration machine with complete interstage cooling and throttling valves in series	8.17
8.3	Advances in two-stage refrigeration machines	8.18
8.3.1	Compound two-stage refrigeration machine	8.18
8.3.2	Two-stage refrigeration machine with one two-stage compressor	8.19
8.3.3	Two-stage refrigeration machine according to the Voorhees cycle	8.19
8.3.4	Two-stage refrigeration machine according to the Gimbalvio cycle	8.22
8.4	Bibliography	8.24
Chapter 9	Three-stage refrigeration machines	9.1
9.1	Three-stage compression process	9.1
9.2	Schematics of three-stage refrigeration machines	9.2
9.2.1	Three-stage refrigeration machine with working fluids of the HFC and the HCFC types	9.2
9.2.2	Three-stage refrigeration machine with R-717	9.3
9.2.3	Three-stage refrigeration machine with R-744	9.4
9.3	Bibliography	9.6
Chapter 10	Cascade refrigeration machines	10.1
10.1	Basic calculations	10.1
10.2	Additional components	10.3
10.3	Bibliography	10.4

Chapter 11	Special cases of refrigeration machines	11.1
11.1	Refrigeration machines with azeotropic mixtures	11.1
	11.1.1 “Cycle method”	11.1
	11.1.2 Exergy analysis	11.2
11.2	Refrigeration machines with zeotropic mixtures	11.4
	11.2.1 “Cycle method”	11.4
	11.2.2 Exergy analysis	11.6
11.3	Refrigeration machines operating according to a supercritical cycle	11.8
11.4	Refrigeration machines with air as the working fluid	11.11
	11.4.1 Simple air refrigeration machine	11.11
	11.4.2 Air refrigeration machine with RHE	11.13
	11.4.3 Air refrigeration machine operating according to the “Russian cycle”	11.14
11.5	Bibliography	11.15

Part II. Tutorials

Tutorial 1	Thermodynamic diagrams	T.1
Tutorial 2	Basic calculations for a vapor-compression refrigeration machine	T.5
	2.1 Simple refrigeration machine	T.5
	2.2 Refrigeration machine with a regeneration heat exchanger	T.10
	2.3 Refrigeration machine with a closed (semi-hermetic or hermetic) compressor	T.14
	2.4 Refrigeration machine with a closed (semi-hermetic or hermetic) compressor and a regeneration heat exchanger	T.15
Tutorial 3	Theoretical indicator diagram for a piston compressor	T.16
Tutorial 4	Basic calculations for a two-stage vapor-compression refrigeration machine	T.20
Tutorial 5	Schematics of real two-stage refrigeration machines	T.24
